

AAE1001 - Introduction to Artificial Intelligence and Data Analytics in Aerospace and Aviation Engineering

Week 7 – Software Installation and Setup (MAC)

Dr. Guohao Zhang, Assisted by

Mr Zekun ZHANG, Mr Mingda YE, Ms Jingxiaotao FANG, Mr Chin Lok TSANG, Mr Di HAI, Mr Zhengdao LI

Software Installation and setup Guide

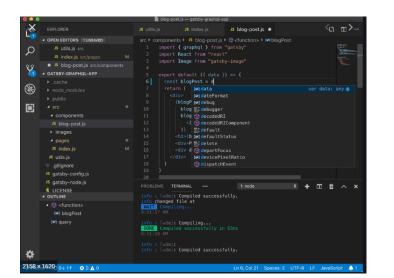

Install VS code in Mac

Step 1: Download the latest VS code https://code.visualstudio.com/download

Step 2: Install latest VS code in Mac

Tutorial Video:

https://www.youtube.com/watch?v=MZ Zw7VU9T4c&ab channel=POLYUIPNL

Visual Studio Code is a free source-code editor made by Microsoft for Windows, Linux and macOS. Features include support debugging, syntax highlighting. intelligent code completion, snippets, code refactoring, and embedded Git.

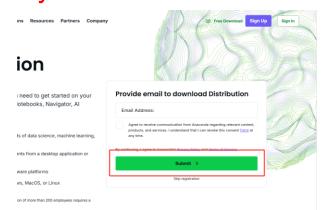

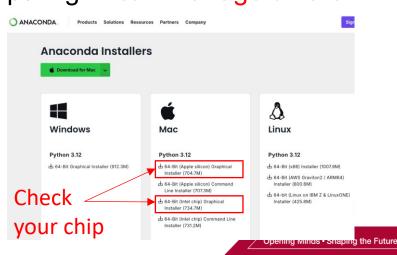

Install Anaconda for Python management

https://www.anaconda.com/download

➤ Anaconda is an open source Python and R distribution designed for scientific computing, data science, machine learning, and big data analysis. It provides a complete set of tools and libraries to facilitate data processing and scientific computing. It can manage different

Python versions.

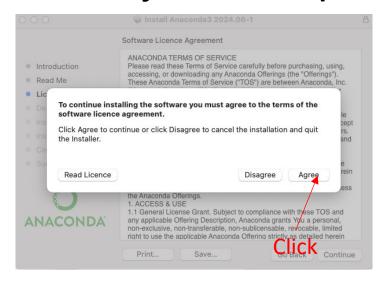

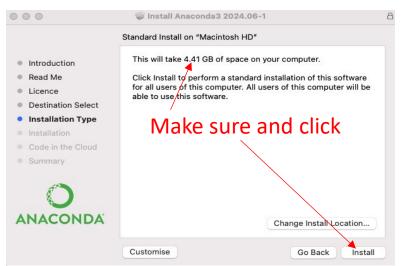

Install Anaconda for Python management

➤ The process of **Anaconda** installation can automatically install the newest **Python** and **Matplotlib**

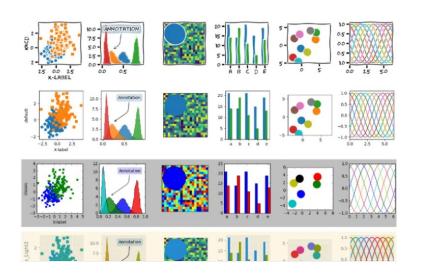

Page

Matplotlib introduction

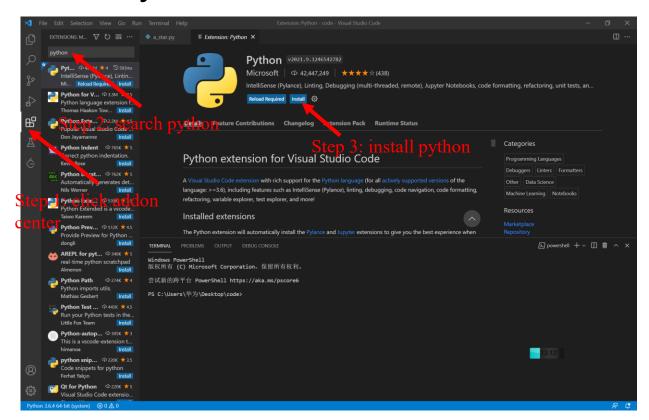

Matplotlib is a plotting library for the Python programming language and its numerical mathematics extension NumPy. It provides an object-oriented API for embedding plots into applications using general-purpose GUI toolkits like Tkinter, wxPython, Qt, or GTK+.

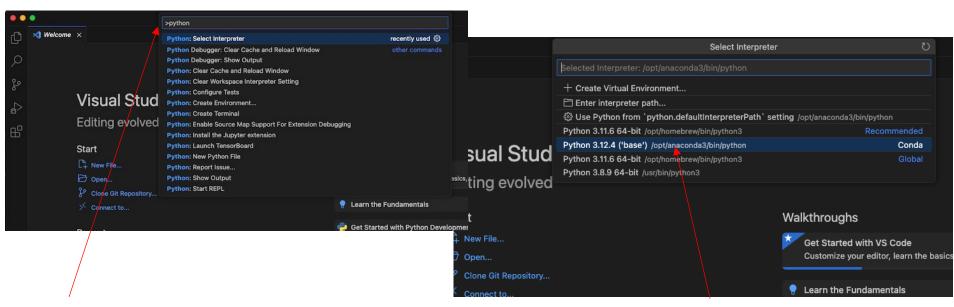

Install Python addon in VS code in Mac

VS code setting

Step1: Type here and choose this

Step2: Choose anaconda

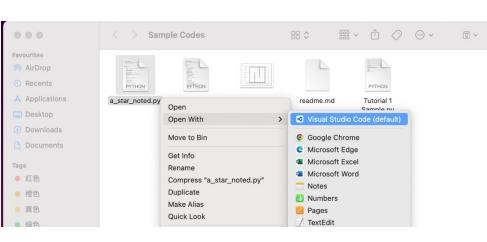

Run A Star in VS code

a_star_noted.py

>step 1: Open the code sample by VS code

Right click

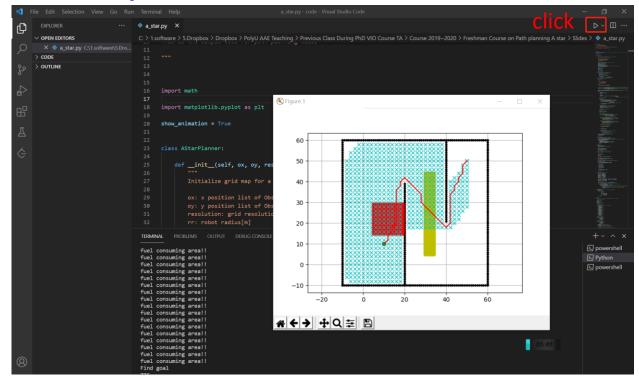

```
D: > Research > course > TA > TAcode > PolyU_AAE1001_Github_Project-main > PolyU_AAE1001_Github_Project-main > Sample Codes > 🍨 a_star_noted.py
      A* grid planning
      author: Atsushi Sakai(@Atsushi_twi)
               Nikos Kanargias (nkana@tee.gr)
      See Wikipedia article (https://en.wikipedia.org/wiki/A*_search_algorithm)
      This is the simple code for path planning class
       import math
       import matplotlib.pyplot as plt
      show_animation = True
      class AStarPlanner:
           def __init__(self, ox, oy, resolution, rr, fc_x, fc_y, tc_x, tc_y):
               Initialize grid map for a star planning
```

Run A Star in VS code

➤ step 2: Run the demo

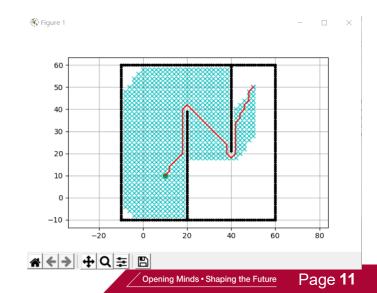

Run A Star in VS code

```
| Temmond | Employee | Section | Sec
```

A* is a graph traversal and path search algorithm, which is often used in many fields of computer science due to its completeness, optimality, and optimal efficiency. One major practical drawback is its space complexity, as it stores all generated nodes in memory.

Run the code

Troubleshot: Connect Github page via command in VS Code

- > Input the command below to the terminal (change the blue to your info)
 - git config --global user.name weisongwen
 - git config --global user.email wenwsrobo@gmail.com

```
